

PERUN
CROATIAN CUBESAT

Gdje se razvija projekt?

University of Zagreb
Faculty of Transport and Traffic Sciences

```
using System;
using System.Threading;

namespace mhaic
{
    class Example016
    {
        // To get here the event must have occurred. Process the event (in this
        // case just print out a message).
        void HandlerTask()
        {
            Console.WriteLine("Handler task - Processing event.\n");
        }

        //-----
        static void VPeriodicTask( void *pParameters )
        {
            const TickType_t xDelay500ms = pdMS_TO_TICKS( 500UL );

            /* As per most tasks, this task is implemented within an infinite loop. */
            for( ;; )
            {
                /* This task is just used to 'simulate' an interrupt. This is done by
                periodically generating a simulated software interrupt. Block until it
                is time to generate the software interrupt again. */
                vTaskDelay( xDelay500ms );

                /* Generate the interrupt, printing a message both before and after
                the interrupt has been generated so the sequence of execution is evident
                from the output.
                The syntax used to generate a software interrupt is dependent on the
                target hardware. */
                HandlerTask();
            }
        }
    }
}
```

Bok svima, nadam se da imate dobar dan. 😊 Šaljem link na članak vezano za slovensku CubeSat misiju TRISAT, kojoj je cilj demonstracija slovenskih nano-tehnologija.

Istraživanje javnog mišljenja o izgradnji i lansiranju malih satelita u Republici Hrvatskoj

Poštovani,

ovim Vas putem pozivamo da podijelite s nama svoj stav o izgradnji i lansiranju malih satelita u Republici Hrvatskoj. Popunjavanje ovog upitnika u prosjeku traje od 5 - 7 minuta. Ispunjavanje upitnika je u potpunosti anonimno. Rezultati će biti korišteni u svrhu osmišljavanja i pripreme novih svemirskih projekata u budućnosti.

O malim satelitima:

Satelit je uređaj postavljen u Zemljinu orbitu. Može biti korišten u razne svrhe poput satelitske komunikacije, satelitske navigacije, demonstracije naprednih tehnologija i drugog. Tradicionalni sateliti su kompleksni, njima upravljaju velike multinacionalne tvrtke i organizacije, a sama izgradnja i lansiranje može trajati 10 godina i više. Izgradnja i lansiranje malih satelita (nanosateliti ili Cubesatovi) svjetski je trend, a prvi takav satelit lansiran je 2003. godine. Kako samo ime kaže, Cubesatovi (eng. cube = kocka) građeni su od kocki dužine stranice od 10 cm. Mogu se izraditi sastavljanjem gotovih komponenti dostupnih na tržištu što smanjuje njihovu cijenu i vrijeme izrade. Često ih lansiraju sveučilišta u edukativne i eksperimentalne svrhe.

Unaprijed zahvaljujemo na Vašem vremenu i suradnji.

S poštovanjem,
Tim Perun I
